YEAR : 2025-26
COURSE CODE : CSE0001
DATE : 28-3-2026

INTRODUCTION

This project was assigned as part of the Digital Literacy course with the aim of developing essential digital skills required in today's academic and professional environment. As a Student Digital Ambassador, the objective was to understand and demonstrate the importance of digital literacy through practical tasks. The project covers various aspects such as creating an awareness infographic, building a professional digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime and online safety. Each task helped in improving my knowledge of digital tools and responsible online behavior. This project not only enhanced my technical skills but also made me more aware of safe and effective digital practices.

TASK-1

For this task, I created a digital literacy awareness infographic using Canva, an online design tool. The infographic was designed as a one-page visual representation to explain the importance of digital literacy to students. It included key topics such as the meaning of digital literacy, useful digital tools, safe internet practices, and email etiquette.

Digital literacy was explained as the ability to use digital tools effectively, safely, and responsibly. I also included examples of commonly used tools like Google Docs, Canva, and GitHub. The infographic highlighted important safety practices such as using strong passwords, avoiding suspicious links, and protecting personal information. Additionally, it covered basic email etiquette, including using proper subject lines and maintaining a professional tone.

While creating the infographic, I found Canva very helpful due to its templates and design features. However, selecting the most relevant information and presenting it clearly in limited space was a challenge. Overall, this task improved my ability to communicate information visually.

TASK-2

In this task, I created and updated my profiles on multiple digital platforms including GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional online presence and showcasing skills and achievements.

On GitHub, I created a profile README that includes my basic details such as name, branch, and learning goals. GitHub is useful for managing projects and sharing code. On LinkedIn, I updated my education details, which helps in professional networking and connecting with recruiters and professionals. Kaggle was used as a platform to explore data science and participate in learning activities.

These platforms play an important role in career development and skill enhancement. Over the next four years, I plan to regularly update my profiles, upload projects, and connect with professionals in my field. This task helped me understand the importance of maintaining a strong digital presence.

TASK-3

In this task, I explored coding and collaboration platforms. For the coding part, I used HackerRank and completed a beginner-level problem. This helped me understand the basics of problem-solving and coding practice.

For the collaboration part, I created a Google Form titled “Digital Literacy Awareness Quiz.” The form included five questions related to digital literacy, safe internet practices, and professional communication. I also viewed the responses in Google Sheets, which helped me understand how data can be collected and analyzed.

These tools are very useful for academic purposes. Coding platforms help in improving logical thinking and programming skills, while Google Forms is helpful for conducting surveys and quizzes. This task enhanced my understanding of online tools that support learning and collaboration.

TASK-4

Poor digital communication can lead to misunderstandings and negative impressions. For example, if a student sends an email without a proper subject line or uses informal language, it may appear unprofessional and disrespectful. This can result in delayed responses or miscommunication.

Such problems can be avoided by following proper email etiquette, including using a clear subject line, polite tone, and structured message. Proofreading emails before sending is also important. This task helped me understand the importance of professional communication in academic and professional settings.

TASK-5

While researching cybercrime, I learned how common phishing and online frauds have become, especially among students. Many fake messages look very real, making it easy to fall into such traps. Even a small mistake, such as clicking a suspicious link, can lead to serious consequences like financial loss or data theft.

This task increased my awareness about online safety. One habit I will change is being more careful before clicking on any unknown links or sharing personal information. I will also use stronger passwords and enable two-factor authentication. This task helped me become more responsible while using digital platforms.

CONCLUSION

This project helped me understand the importance of digital literacy in today's world. Through various tasks, I learned how to use digital tools effectively, communicate professionally, and stay safe online. It also improved my ability to create content, manage online profiles, and use collaboration platforms. Overall, this project was a valuable learning experience that will help me in my academic journey and future career.
